

RFID Lockers

Radio Frequency Identification

Easy to use

Easy and flexible programming

High compatibility

RFID System

The rugged ABS high-density plastic lockers have a great flexibility and need no electricity to operate. Because of its features, they can be easily moved around or added to for increased capacity. These low-maintenance lockers already have successful operation at back office locations and other venues.

RFID system is highly user friendly. Your customers and guests can purchase a pre-coded wrist-band/token that opens the locker when held up to the RFID lock. It's the safest way to keep stuff locked up while your guests enjoy having fun at your venue.

Another great benefit is that the locks can be pre-coded for the day, week or month. While they're gone, your guests will have peace of mind that their belongings will be intact when they return.

Features:

- Many pre-coded programs and settings
- Can be integrated within your current or future RFID system
- High security against manipulation
- The locker can be opened or locked by use of the transponder; Just press smoothly and the door opens!
- Chips are integrated within the wristbands, pass or keychain
- Very suitable for daily rentals or longer term use
- For lockers used daily all passcodes can be reset

Options:

- Several Colors
- Personal Branding
- Info terminal
- Key identity card and credit card in one

The transponder (card, watch, fob or wristband with chip) can be used as access permission or can be used for cashless payments within the area.

The use will be recorded by readers. The transponder is secured against copying and is wear free. In addition transponders can be made sole and water proof.
