How to solve the problem of managing & securing personnel belongings in a restricted environment at a queue-line without causing congestion.

Cedar Fair is a world leader in owning and operating regional amusement parks and water parks, complemented with resort, hotel and recreational properties dispersed throughout the North America. Annually these parks welcome approximately 28 million guests and provide some of the worlds largest, tallest, longest, fastest & most exhilarating roller coaster rides.

The Problem

Most roller coaster rides are required to provide short term guest storage lockers, most importantly to protect guests both on the ride & in the park below from loose items that may cause serious harm to guests or damage to the workings of the ride, the problem with traditional lockers being placed in a location near the queue lines has been the cause of an obstacle of congestion with the merging of ongoing & off-going guests, therefore creating the need to place the lockers some distance from the ride, meaning guests are left without their personnel devices for long waiting periods whilst in the queue line.

The VLocker Solution

Vlocker understood there was a need to create a dual sided (dual door) locker, whereby the locker installation, could be built into the queue-line dividing the ongoing guests from the off-going, allowing guests to retain the personnel items such as mobile phones to continue to use for a longer period of time, whilst waiting in line. Vlocker designed & built a fully patented, award winning solution & applied this to Cedar Fairs Twisted Timbers & Steel Vengeance coaster rides in May of 2021.

Another great feature Vlocker provides is the social distancing software, designing to allocate lockers to guests at the required separation distance of 6', proving a Covid approved solution.

VLocker

Testimonial

July 1, 2021

The ride lockers installed at Twisted Timbers have been a great addition to the overall operation of the ride. The locker system adds a level of convenience for guests who want to take their cell phones into the queue while also providing a safe location to store their phones while riding Twisted Timbers. Overall, the purchase and installation process went very smoothly and VLocker has been a great partner.
