## How electronic locker systems are operating in major theme park installations around the world

Theme parks globally need to provide secure storage lockers for guests to secure their personal belongings, while they enjoy the many attractions these venues have to offer.

### The Problem

Customization is critical to supplying your client with a solution that they require. It's important when creating a solution that your project partner's input is carefully considered and implemented to ensure a successful outcome.

Luna Park Sydney (July 2021) has recently undergone a major makeover and has now totally transformed from a "nostalgic amusement park" to a "world class theme park".

Before VLocker was awarded the contract, the venue had very specific requirements when a guests was riding the new rollercoaster's they were required to place their personal belongings at the ride station without the need to pay or make contact with an interface such as a touchscreen or keypad etc.

### The VLocker Solution

Creating a new solution is always a challenge. However, VLocker was up to the challenge and they were able to create a wall mounted locker installation in close proximity to the ride cars on the ride platform & adjacent to the ride operator.

The design was simplistic, as the guests unloaded from their ride car, the ride operator would press a wall mounted slam button, therefore opening all locker doors simultaneously, allowing guests to remove their personal belongings quickly without the need to make contact with the lockers, the next group of on-boarding riders would then place their belongings in the open lockers before boarding the ride cars and the ride operator ensures that all locker doors are securely closed.

Vlocker Pty Ltd

### LETTER OF REFERENCE

Vlocker has currently installed 280 lockers at several locations at LEGOLAND Malaysia on a revenue share basis.

During the planning process Vlocker provided detailed information on space and network requirements.

The lockers were delivered and installed in time for opening of LEGOLAND Malaysia on Sept 15<sup>th</sup> 2012. Vlocker has provided continuous support since the lockers went operational.

The lockers are well used by the guests. The handling is easy for guest and staff alike.

We are planning to install over 500 more lockers at our upcoming water park to be opened to the public by the last quarter of 2013.

We are satisfied with the quality of the installation and the support we get from the Vlocker team. LEGOLAND Malaysia can recommend Vlockers for its easy use and reliability.

Yours Sincerely,

Siegfried Boerst  
General Manager
